

# **Green Infrastructure Design Challenge Instructions**

Directions: Analyze your assigned picture and then draw a site plan for how you would incorporate green infrastructure into the redesigned site. Be both creative and practical when determining what solution can work for the site.

Consider the following when designing your site plans:

- What type of green infrastructure strategy is most appropriate for your picture?
- How do you want the finished site to look?
- Where is the stormwater flowing from?
- Cost
- Safety of people, plants, and animals
- Vegetation types/size/sun requirements
- Traffic concerns
